

## **Friulparchet** Castello by Friulparchet

Friulparchet has started production of its new product **Castello of BioLinea** collection, to pave halls of a XVII century old Friulian manor house.

For recovery of building, thanks to skills of Friulparchetcarpenters, has been proposed again colours and lived finishes of the existing wood floor. These has been applied on three layered planks, in whole European Oak from Slavonia, for a product of certain quality, majesty and refinement, composed at 100% by this noble wood. Its manufacturing techniques, characterized by crossed assembly of three layers of European Oak, guarantee stability and resistance in time, since gluing of the same wood specie improves physical and mechanical features. This allows realization of big size wood planks, indeed sizes of Castello are important and in line with big rooms and high ceilings of this ancient building. Thickness is 20 mm and it is supplied in mixed widths of 200, 300 and 400 mm and random lengths from 1500 to 3000 mm. Finishes and colours available on Castello are many, on request also customized.
