BioLinea: all the beauty of yesterday's parquet

BioLinea is the Friulparchet "Bio" Collection distinguished by natural finishing applied by hand and available in different colors. The different types of working, stain, and finish make BioLinea unique. Specific working techniques have been expressly chosen to bring out all the wood's grain clearly and help give it the characteristic warmth, in this way making parquet the inimitable flooring material it is. In step with today's demand for green architecture, the BioLinea wood floor gives home the ambience of other eras and the elegance of traditional style but with all the comfort and convenience of a modern pre-finished floor. With all the value of traditional craftsmanship, every lot produced is "as an end in itself" and therefore unlike any other. The BioLinea Collection is available in different types of working: pre-polished, brushed, hand-planing, sawn and woodworm effect, all exclusively in European Oak. One particular member of the BioLinea Collection known as "Tabula Quercus" is 100% composed of a single body of noble Slavonia Oak. www.friulparchet.eu
